Hi there! This is the Keygen blog and we're all about cracking and chatting. Today, we'll be taking a look at some of the best ways to crack cat sis 2011a. Until we find more or learn otherwise, it appears that Cat Sis 2011a has no serial as such, so it's looking like cracking will be our only hope for getting more features unlocked. So let's see what we can do! We'll start by figuring out how Cat Sis 2011a works and what kind of protection is on it. This is basically the same process as what we did with our recent crack of Logiciel WinRAR. Fortunately, Cat Sis 2011a uses a crack that's been floating around for a while, so there's plenty of info already out there on how to use it. The first step is to enable debugging in Cat Sis 2011a. To do this, click on the tab for "Options" and then "Enable Debugging". Now, restart the program and a new tab will be available. If you want to view what's being said from the program itself, look under the tab called "Messages". If you want to view what's being sent from/to your computer, look under the tab called "Connections". Now, lets take a look at the hardware. You can do this any time you like by clicking on the button for "Show hardware". To change between different types of hardware, click on "Select". The process is exactly the same as it was with WinRAR, so we'll just tell you what to do. Take note that if you're looking for something called "Keygen" or "Serial" anywhere within the software, you've probably already seen it and missed it. Cat Sis 2011a doesn't seem to have any kind of keygen or serial anywhere in its interface or code itself. If you're having trouble finding these things, try doing a search within the program. There's one more thing we need to do before we generate our crack, and that's take a look at the code to see what it's doing and how we should prepare our crack accordingly. The part of the code we're interested in is "common/http_loader.cpp", line #838: Also, after this part of the code, there's some stuff about "http_loader" not being found… but that doesn't matter because this software will use what we downloaded to generate the crack anyway, so it'll ignore this check as well. Let's continue. Now, cat sis 2011a is writing out a file to the output folder called "TMP_ExtExtracted". We need this for our crack to work. It's pretty simple, so let's just copy-paste this line of code somewhere so we can keep it: Now, we'll open up a terminal and compile the program using the command: To see if it worked, we'll restart Cat Sis 2011a and look at what we get in "Messages" and "Connections" again. If you don't want to bother with the Quit Quit button in the bottom left corner of Cat Sis 2011a, just click on "Restart".
